- Articles contain photo's and/or videos.
- The app is available in Dutch and English.
- Possibility to translate articles into 12 languages.

Information on language development, hearing aids, parent child interaction, CI, Deaf culture etc.

My child doesn't want to wear their hearing aid. Why is that? #HEARING AID #HEARING #WEARING HEARING AID

General information

If your baby or toddler doesn't want to wear their

- hearing aid, there are several possible reasons for this: Your child enjoys grabbing and examining things. This impulse will also drive your child to take their hearing aid out of their ears. This is common in
- young children. The earpiece doesn't fit properly. Look for red pressure marks in your child's ear. The earpiece
- may need to be replaced. Your child may be suffering from an ear infection. In that case, leave the hearing aid out of the infected ear for a few days.
